

Odor Sanitizing PCO UPGRADE KIT

Now you can add odor and toxic VOC fighting benefits to your existing Platinum UV system. The Upgrade Kit fits onto your previously installed Platinum UV germicidal UV light system and require no additional wiring or electrical connections. The Upgrade Kit uses a magnetic mounting plate and the existing Platinum UV power supply.

How it Works

Activated carbon cells remove airborne contaminants as the air is circulated by the central air system.

Airborne microbes and volatile organic compounds (odor molecules) are captured by the activated carbon matrix and held in place by the microscopic structure where they are neutralized by a process called photocatalytic oxidation.

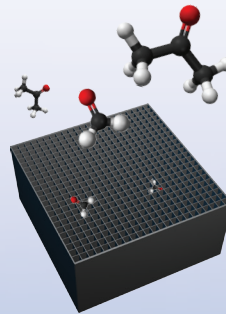

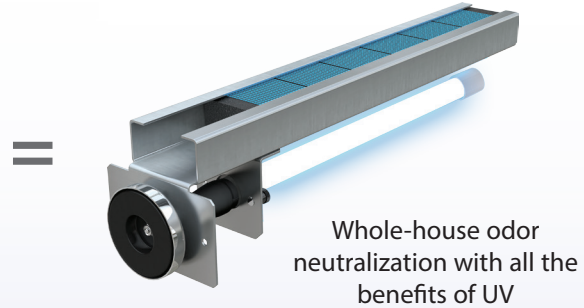

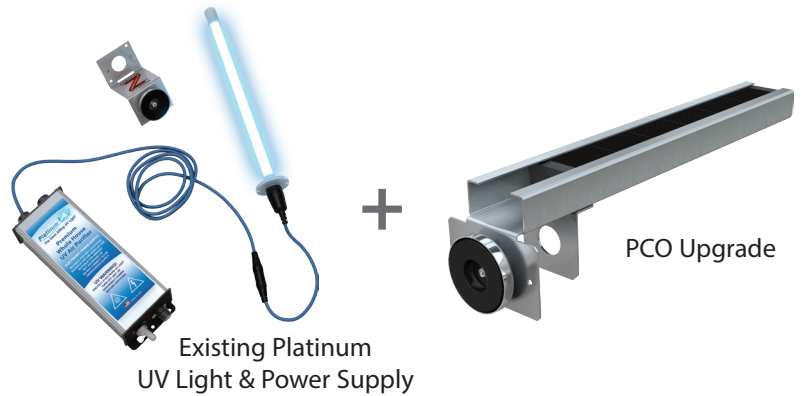

ODORS & VOCs

- Tobacco Smoke
- Pet Odors
- Cooking Smells
- Building Materials
- Flooring & Carpets
- Paints & Solvents
- Cleaning Chemicals
- Gas & Oil Fumes

BIOLOGICAL

- Mold
- Bacteria
- Viruses
- Allergens

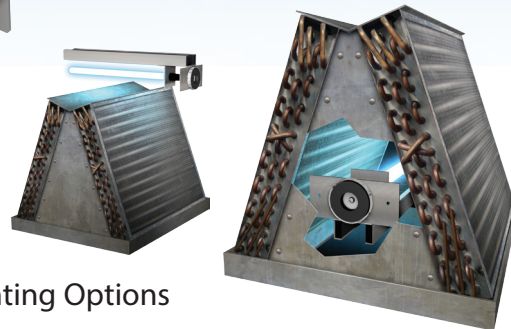

ACTIVATED CARBON

The matrix of titanium dioxide infused activated carbon cells attracts and holds odors, microbes, and VOC molecules which are then catalyzed by exposure to UV light. The carbon cells are self-cleaning and the system is virtually maintenance-free other than lamp replacement.
