

POLARIZED AIR CLEANER

Conventional HVAC filters only capture large particles (PM10) but the EPA has determined that particles of 2.5 microns, or smaller, (PM2.5) pose the highest health risk. The Platinum Polarized Air Cleaner (PAC) captures particulates of all sizes (down to an incredibly small 0.1 microns). A small electric charge is applied which makes them stick together, so they are easier to capture without significantly increasing static pressure.

- UV-reactive filter media with antimicrobial nanotechnology
- Captures particulates, allergens, pet dander, dust mites, spores, etc.
- 97% effective capturing particles down to .3 microns (.00001 inch)
- Low-cost media replacement (*3-6 months on average)
- Fits standard 1" filter slot
- Helps to reduce odors and VOCs
- Lifetime system warranty

PAC captures particulates of all sizes (down to an incredibly small 0.1 microns). It uses an electrostatic charge to attract and clump particles together making them easier to capture without restricting air-flow.

Airborne contaminants can be divided roughly into thirds. PAC captures particulates much more efficiently than conventional filters.

DUST MITE
10 microns

VIRUS
2 microns

PAC CAPTURES

COARSE PARTICLES (<10 microns)

- Bacteria
- Dust & dirt
- Dust mites & debris
- Mold spores
- Pet dander
- Pollen

FINE PARTICLES (<2.5 microns)

- Atmospheric dust
- Pet allergens
- Smog
- Soot
- Tobacco smoke
- Viruses

PAC filter media is safe for use with germicidal UV lights. Most HVAC filters are not.
